

## Press Release

### HS Infra Achieves ISO 27001:2013 Accreditation

HS Infra is proud to announce that it has recently received ISO 27001:2013 certification from SOCOTEC for the scope of activities covering its Information Security for the provision of critical infrastructure solutions and services including design, ICT cabling, SCIDA assurance and consultancy.

This recognition is a major step forward for our company and staff. The audit concluded that the requirements of the ISO 27001 standard are being met and that a genuine continuous improvement process is in place for Information Security.

The impact of this certification and the introduction of an Information Security process at HS Infra is essential. Over and above clarifying and setting out clear practices that enable HS Infra staff to work in a consistent, efficient manner, this certification answers the selection criteria that are increasingly being required by some customers. For prospective customers, investors, suppliers and all other interested parties, it also brings more credibility to HS Infra's projects and marks its commitment to information security.

HS Infra Founder and Director Steve Hutchinson stated "Having already achieved ISO 9001 we are delighted that through ISO 27001:2013 we can now show our dedication to Information Security and the provision of Critical Infrastructure too".
