

Case Study

MOD Data Centre Rationalisation Programme

OBJECTIVES

HS Infra were required to conduct physical surveys of over 20 Data Centres/NERs to provide information on the installed equipment within the data cabinets, with the aim of rationalising to fewer, more modern sites, and ensuring that cyber and physical information matched. The data centre surveys would complement cyber surveys of the whole estate. The surveys were to be collated and submitted within a tight timeframe to allow budgetary analysis to take place.

SOLUTIONS

Following a preliminary planning round, the HS Infra team facilitated access to sites, planned and coordinated site visits and conducted detailed surveys of all Data Centres/NERs, capturing information on all physical equipment at the granular level, producing comprehensive, detailed reports.

BENEFITS

The project was successfully completed by HS Infra within the allotted time, quality and budget. HS Infra provided the client with accurate and timely information in support of their Rationalisation Programme.

AT A GLANCE

- High volume of infrastructure surveys across the UK MOD estate
- SCIDA and stakeholder management
- Effective liaison with site management teams
- Security clearance
- On time and on budget

"Working closely with site Point of contact and using our vast MOD experience we were able to facilitate access to the different sites for the client to ensure that delivery was on time."
